# 1. Domain analysis

## 1.1 Domain models

This section shows the domain model(s).

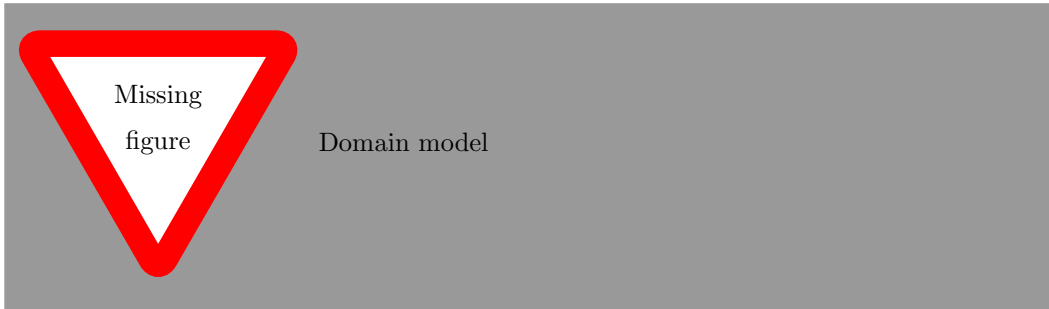

Figure 1.1: The domain model for the system.

## 1.2 Domain constraints

In this section we provide additional domain constraints.

- This is a first constraint.
- This is a second constraint.

## 1.3 Glossary

In this section, we provide a glossary of the most important terminology used in this analysis.

- **Term1**: definition
- **Term2**: definition

## 2. Functional requirements

### Use case model

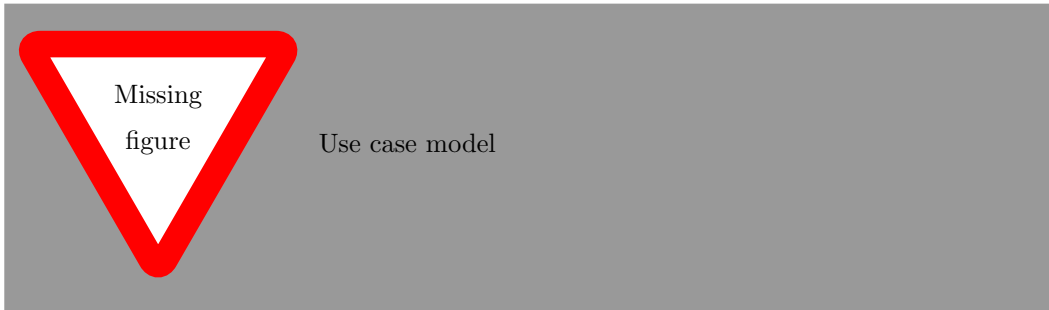

Figure 2.1: Use case diagram for the system.

### 2.1 Use case overview

**UC1: Name** Short summary of this use case scenario

### 2.2 Detailed use cases

#### 2.2.1 *UC1*: Name

- **Name:** Name of use case 1
- **Primary actor:** primary actor
- **Secondary actor(s):** secondary actor(s)
- **Interested parties:**
  - *Name of interested party:* reason why party is interested
- **Preconditions:**
  - First precondition.
  - Second precondition.
- **Postconditions:**
  - First postcondition.
  - Second postcondition.
- **Main scenario:**
  1. Step 1
  2. Step 2
  3. Step 3
  4. ...

- **Alternative scenarios:**

- 3b. Alternative at step 3

- **Remarks:**

- First remark

## 3. Non-functional requirements

In this section, we model the non-functional requirements for the system in the form of *quality attribute scenarios*. We provide for each type (availability, performance and modifiability) one requirement.

### 3.1 Availability

#### 3.1.1 *Av1*: Name of the quality attribute scenario

Shortly describe the context of the scenario.

- **Source:** source
- **Stimulus:**
  - Description of a first stimulus.
  - Description of a second stimulus.
- **Artifact:** the stimulated artifact
- **Environment:** the condition under which the stimulus occurs
- **Response:**
  - Describe how the system should respond to the stimulus.
- **Response measure:**
  - Describe how the satisfaction of a response is measured.

### 3.2 Performance

#### 3.2.1 *P1*: Name of the quality attribute scenario

Shortly describe the context of the scenario.

- **Source:** source
- **Stimulus:**
  - Description of a first stimulus.
  - Description of a second stimulus.
- **Artifact:** the stimulated artifact
- **Environment:** the condition under which the stimulus occurs
- **Response:**
  - Describe how the system should respond to the stimulus.
- **Response measure:**
  - Describe how the satisfaction of a response is measured.

### 3.3 Modifiability

#### 3.3.1 *M1*: Name of the quality attribute scenario

Shortly describe the context of the scenario.

- **Source:** source
- **Stimulus:**
  - Description of a first stimulus.
  - Description of a second stimulus.
- **Artifact:** the stimulated artifact
- **Environment:** the condition under which the stimulus occurs
- **Response:**
  - Describe how the system should respond to the stimulus.
- **Response measure:**
  - Describe how the satisfaction of a response is measured.

### 3.4 Usability

#### 3.4.1 *U1*: Name of the quality attribute scenario

Shortly describe the context of the scenario.

- **Source:** source
- **Stimulus:**
  - Description of a first stimulus.
  - Description of a second stimulus.
- **Artifact:** the stimulated artifact
- **Environment:** the condition under which the stimulus occurs
- **Response:**
  - Describe how the system should respond to the stimulus.
- **Response measure:**
  - Describe how the satisfaction of a response is measured.
